### EXPLANATORY NOTES

<table>
<thead>
<tr>
<th>#</th>
<th>Station with less than 15 years' of data</th>
<th>Figure in brackets next to the station name is the number of years' data used to calculate averages. At least 15 years' of data required for a reliable average. Average annual total in these cases is therefore an estimate.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Annual *</td>
<td>No long-term averages available</td>
<td></td>
</tr>
<tr>
<td>Yrs of Data</td>
<td>Number of years' data used to calculate averages</td>
<td></td>
</tr>
<tr>
<td># of Missing Returns</td>
<td>Number of cumulative returns missing for this station for the year (including current month)</td>
<td></td>
</tr>
<tr>
<td>Return Received</td>
<td>Monthly return received Yes (1) or No (0)</td>
<td></td>
</tr>
<tr>
<td>Long Term Average</td>
<td>Long Term Annual Average</td>
<td></td>
</tr>
<tr>
<td>Average for Month (a)</td>
<td>The total received for this specific month, averaged over a period of at least 15 years.</td>
<td></td>
</tr>
<tr>
<td>This Month's Total (b)</td>
<td>The total rainfall received during the current month.</td>
<td></td>
</tr>
<tr>
<td>% of Monthly Average (c)</td>
<td>The current month's total as a percent of the long-term average monthly total (b/a X 100%).</td>
<td></td>
</tr>
<tr>
<td>Average Cumulative Total (d)</td>
<td>Starting at the beginning of the climatic year (July), the sum of each month's average monthly total, up to the end of the current month. By the end of the climatic year (end June), this total thus equals the long-term average annual total.</td>
<td></td>
</tr>
