BUSINESS UNIT RESPONSIBLE FOR THE BID

SANParks wishes to procure the services of a service provider to do Back Scanning (Digitization / Conversion) and indexing of 20 million pages in various sizes. Some of the documents/records have been scanned but require quality assurance and indexing.

CONTEXT OF THIS PROCUREMENT

The purpose of back scanning/ digitization / conversion is to enhance access to records/ documents for accessibility, efficiency, transparency and good corporate governance. Documents to be scanned are in different parks and some will need to be transported to the scanning station.

CONTRACT PERIOD

The contract will be for a period of **Three (03) years**.

SPECIFICATIONS/SCOPE OF WORK

By implementing the back scanning, SANParks seeks to establish a programme for the authentic, complete and accessible digital capture of paper records. These requirements identify the necessary resources and standards to implement a compliant records digitization programme for the purposes of good record keeping, archival preservation, and business continuity planning.

Digitization is the process of converting any physical item, such as a paper record, photograph or graphic items, into an electronic representation or image that can be accessed and stored electronically.

In the context of these requirements, digitization of SANParks records should be done to support SANParks objectives for organisational transparency, knowledge sharing and business continuity by providing better access to, and faster retrieval of information, and more cost-effective storage of SANParks records.

1. SANParks is undertaking the digitization for the following reasons, amongst others:

1.1 Reduction of Paper Records and Business Continuity

Digital records can be stored on electronic storage devices and thus reduce the need for physical space while also promoting strategies for vital records protection. This strategy is undertaken as part of a disaster mitigation strategy.

1.2 Better Information Sharing

Records digitization and increased use of electronic records improves information sharing by allowing access to digital information on web sites, records and EDRMS by allowing efficient dissemination of information. Electronic records support more efficient ways of information access and sharing.

1.3 Archival Preservation

Digitization offers a strategy for long-term preservation of archival records by reducing handling of original hard copy archives, improving access to archives by making digital archives available through databases, websites and via email.

2. Deliverables

The following high-level deliverables form part of the scope of the project and must be considered by the service provider when pricing:

- Scanning will take place at SANParks Head office in Pretoria and in Kruger National Parks (Skukuza)
- The service provider will provide his own transport and labour for the project
- Movement of records from archives or any offices to scanning area
- The service provider will provide scanning and indexing equipment
- Managing the project staff
- Monitoring and managing the sorting of records, scanning, indexing, quality assurance process
- Re-shelving of documents
- Attending meetings
- Writing and delivering reports pertaining to the project
- Post- implementation support and skills transfer

3. BACKGROUND OF THE REQUEST FOR PROPOSAL

Record-keeping standards require that records be authentic, complete and accessible to be relied on as evidence. SANParks may be required to prove the authenticity, accuracy and completeness of digitized records. The following is a summary of requirements for ensuring reliable digital copies:

3.1. Authentic

The product of routine, documented, authorized copying and registration processes.

3.2. Complete

Accurate, legible reproduction of the original that contains all intellectual and physical components of the original without alterations to content.

3.3. Accessible

Available, searchable and readable to all those with a right to access it, for as long as it is required.

In order to achieve the qualities of authenticity, completeness and accessibility, SANParks must ensure that records digitization efforts are undertaken as part of an overall record-keeping programme. A recordkeeping programme consists of recordkeeping policies, standards, procedures and guidelines, and robust, reliable technology to support recordkeeping.

A critical part of the planning stage is incorporating good record-keeping practices into records digitization initiatives through the identification of record-keeping requirements and tools that will ensure digitized records will have the same evidentiary qualities listed above that should be inherent in hard copy original records.

Once records are digitized, consideration will need to be given on how they will be retrieved for use, on how SANParks EDRMS relates to the system used to manage hard copy records. It is important that electronic and hard copy records are organised, tracked, secure and retrievable within a record-keeping system (SANParks is currently in a process to implement Open Text ECM). The successful bidder will not be expected to implement their own system but will use the one SANParks is currently implementing as part of a separate project.

Record-keeping systems facilitate the management of records throughout their lifecycle and minimize the risks associated with poor record-keeping such as loss of or inaccessibility to records. Record-keeping systems provide the tools necessary for records retention and disposal, metadata capture, records classification, tracking and indexing.

All SANParks records are subject to the Records Management policy. At the end of a records life cycle, when a record progresses from active to semi-active to non-active, the record will either be eventually destroyed or retained as archives due to its enduring historical value. The disposal of physical and electronic (digital) records requires authorisation by SANParks Senior Manager: Information and Records Management through the issuance of an approved records retention schedule. Paper originals should

not be disposed of unless approved by the Senior Manager: Information and Records Management authorising the disposal of original hard copy records after digitization.

The following are principles to be followed when managing the imaged copies to ensure that they continue to be authentic, complete and accessible:

- Capture of the image copies as records into SANParks record-keeping system and they should be in a PDF format.
- Management of the image copies under the framework of SANParks File plan in alignment with National Archives requirements.
- Keeping adequate record-keeping metadata to facilitate the records' preservation, use and retrieval; and
- Careful planning for long term accessibility of the images.
- Digitized records containing sensitive information will require appropriate metadata; security and access markers, compliant with the file plan and information privacy and information classification policies, to be incorporated into Enterprise Content Management (ECM) system where the digitized records will be stored. This is critical to ensure that the records are only accessed by those authorized to access the records, and to reduce the risk of possible unauthorised access to sensitive information. This information will be managed in the form of a file plan that identifies records series and their corresponding information sensitivity levels.
- During the digitization process any security classified records (hard copy and digital) will be kept separate from public or unclassified records. This is done to ensure that classified records can be managed as a separate group, in addition to being protected for future records declassification initiatives.
- All records, hard copy and electronic records (digitized and born-digital records such as emails) require unique identifiers or metadata elements to facilitate their management. Metadata is information about records, such as their date, title, description, security classification, retention, etc. The more metadata captured, the more complete the record, and the easier it will be to facilitate the management of and access to records.

The following is a list of recordkeeping metadata elements required by SANParks (where applicable):

METADATA ELEMENTS

- Identifier
- Title
- Subject
- Description
- Creator
- Date
- Addressee
- Record type
- Relation
- Function
- Aggregation
- Language
- Location
- Security & Access
- Disposal
- Format
- Preservation
- Pages

4. DOCUMENTATION REQUIREMENTS

SANParks must be able to certify that their electronic records are accurate, unalterable and complete. Altered digital copies are not considered authentic and cannot be used as evidence of SANParks business. Therefore, it is essential that all aspects of the digitization process be well documented including image enhancement techniques, use of security controls and preservation techniques.

It is possible that SANParks may be called upon to justify its claims that digital records may be relied upon as evidence, either for legal purposes, or by an external investigative body or by a member of the public. The measures recommended to certify that authentic, complete and accessible digital capture are as follows:

- Adherence to standards set by Records Management Policy, File Plan, and procedures.
- Application of relevant, complete and accurate metadata.
- Implementation of procedures for accommodating documents with incomplete metadata.
- Use of 'read-only' controls in network servers used for electronic storage.
- Use of security controls such as access passwords, encryption and audit trails to prevent any alteration of the images.
- Use of retention scheduling for destruction, retention or transfer of records.
- Application of security classification for records that contain sensitive information.

5. TECHNICAL REQUIREMENTS

SANParks requires that digitized records meet the minimum technical specifications for image quality based on approved policies and international standards. Applying technical standards ensures the accurate reproduction of SANParks records while also considering the levels of access requirements and the cost of electronic storage. The service provider needs to provide details regarding the back scanning infrastructure that they will deploy at SANParks during the lifespan of the project (e.g. scanners).

6. PROCESSES OCCURRING PRIOR TO DIGITIZATION

The following processes should have been completed prior to commencing digitization of records.

6.1 Preparing Physical Files for Scanning

The following is a list of preparatory tasks that must be undertaken on records prior to digitization commencing. Any additional preservation measures, such as photocopying fragile items, needs to be undertaken at this time.

- Remove the following materials: file clips, staples, plastic sleeves, clips, metal clips and rubber bands.
- Records Retention & Disposition

SANParks has an approved Records management policy that has to be applied to all records to assess their eligibility for digitization.

- Organising Records

Records have been classified and organised according to a file classification scheme.

- Information Security

Records containing sensitive information have been identified and appropriate protection and security measures have been put in place for hard copy and digitized records.

- Metadata

All record-keeping and other technical metadata elements have been identified and documented.

- Remove file dividers such as plastic or cardboard section dividers. If the section divider contains relevant information, make a photocopy and place on file.
- Remove coloured tags and post-it notes from files. If the post-it note contains relevant information, make a photocopy and place on file to be scanned.
- Remove envelopes from file and place the content/s of the envelope on file.

6.2 Capturing Digitised Records into a Record-Keeping System

Capturing digitized records in a record keeping system is one of the most important elements of the process for future access, ease of retrieval and disposal. Electronic records must correlate with their physical counterparts in structure, description (file classifications and series, and indexing). This is where metadata capture becomes increasingly important, because it allows digital records to be tracked.

7. POST DIGITIZATION

7.1 Quality Checking and Control

Quality control measures for checking digital images should be applied throughout the process, preferably by an assigned staff member or a consultant who can chart any errors. This will include checking individual files for any errors in arrangement, imaging or classification. For large volumes, that random sampling (5% to 10%) needs to be applied.

Quality control of images includes checking for:

- smallest detail legibly captured (digitize smallest type size for text; clarity of punctuation marks, including decimal points).
- completeness of detail (digitize acceptability of broken characters, missing segments of lines).
- dimensional accuracy compared with the original.
- completeness of overall image area (e.g. missing information at the edges of the image area); and
- density of solid black areas.

7.2 Review, Evaluation and Revision of Digitization Processes,

It is necessary to review the digitization process and evaluate how effective it has been. This is an opportunity to identify any redundancies, inefficiencies or problems in the process and revise and enhance the process accordingly. Any changes to the process must be reflected in an updated training programme.

7.3 Testing Access to Digital Images

It is important to test retrievability of and access to digital images that have been captured into electronic storage system. A retrieval exercise involving a sample of digitized records will suffice.

7.4 Applying Retention Policy to Digital and Hard Copy Records

Ensure that retention and disposition of image copy and hard copy records in accordance with the file plan. Please note that hard copies of records that are to be kept as archives because of their historic value must not be destroyed.

It should also be noted that records retention schedules apply to all records regardless of the format. In terms of digitization this means that a retention action applied to hard copy records also applies to its corresponding digital copy.

8. SCOPE OF WORK
